Commercial – Student Accommodation

WallsPlus provided the wall frames and trusses for this project. The use of prefab products on a job this size saved the construction company weeks of work, with the walls and trusses being erected and plumbed on site within two weeks. Also considerable time and cost was saved in co-ordinating and managing this project

Commercial - Shop

WallsPlus provided the walls frames and roof trusses. In this case we were able to have the job detailed, manufactured and trucked to site within the week.

WallsPlus provided the wall frames, trusses and timber flooring for these 2 double storey units.

Red Gum

Red Gum

Iron Bark

Cypress

Built for tradesmen by tradesmen!

BENEFITS OF PREFAB V's STICK BUILDING

TIME / MANAGEMENT

- ❖ By purchasing prefab walls and trusses the builder is able to build and manage a greater number of projects annually. Therefore providing a greater overall return.
- ❖ We can ensure your product turns up on time every time.
- ❖ We also specifically number and stack each job to simplify the installation process. This will again save you time and money in not only installation but management of the process.
- ❖ Reduced ordering and management time required by the builder. By not having to detail the job and establish an extensive materials list your time is freed up to maintain and manage the important aspects of each project. Your time is your most valuable asset.
- ❖ We manage the construction and delivery of the prefab products for you.

CONSISTENCY / QUALITY

- ❖ We use industry specific computer software to detail your job to ensure the accuracy and consistency of each and every job. This also enables beam design and engineering computations to be calculated and provided in accordance with Australian Standards [AS1684], at no extra charge.
- ❖ Our walls are produced by a team of tradesmen ensuring you get the best quality work.
- ❖ We use only quality materials in the production of your products.

COST / THEFT

- ❖ By ordering large quantities of loose materials and storing them on the building site for periods of time, theft is a significant cost. The inconvenience to the builder and carpenter can, apart from direct materials costs, also lead to lost productivity and increased labor costs.
- ❖ Raw materials are only available to builders through retail chains. Take advantage of our better buying prices achieved through large volume purchases direct from the manufacturer.
- ❖ Cost and time involved in managing extra staff.
- ❖ Outsourcing is the way of the future. Simpler, easier and more cost effective.

A SIMPLER PROCESS = REDUCED COST

PRODUCT RANGE

We focus on manufacturing and supplying a quality range of products, designed and built by tradesmen specifically for tradesmen. These products include:-

- ❖ Prefabricated Walls Frames
- ❖ Prefabricated Trusses
- ❖ Posi-struts
